

Amit Sarohi

Associate Principal Engineer

Professional Summary

15+ years of experience designing, developing, and delivering scalable, high-performance, enterprise-grade **.NET full-stack applications**.

Skilled in translating complex business requirements into **robust architectural solutions**.

Proficient in **microservices, event-driven architecture**, and API design using **RESTful APIs**.

Strong proficiency in **.NET, ASP.NET Core, C#, Node.js, EF Core, ORM**, understanding of data schemas and database entities.

Hands-on experience with frontend technologies including **Angular, React, Vue.js**.

Hands-on experience with **Microsoft Azure services** including Azure App Service, Azure Functions, Azure Service Bus, Azure Storage, Azure SQL Database, Azure Cosmos DB, Azure Kubernetes Service (AKS), Azure Container Registry (ACR), Azure Key Vault, Azure Monitor, and Application Insights

Hands-on experience with **AWS cloud services** including Lambda, S3, SNS, SQS, DynamoDB, Document DB, and container orchestration using Amazon EKS, CloudWatch etc.

Experience in **DevOps practices, CI/CD pipelines, Docker, and Kubernetes**.

Proficient in **Python, and TypeScript**, leveraging scripting and automation for API development, CI/CD pipelines, infrastructure provisioning, and operational tasks.

Hands-on experience in integrating **Agentic AI/LLM solutions** using Semantic Kernel, Azure Foundry, Lang Chain, Amazon Bedrock, prompt engineering, and Retrieval-Augmented Generation (RAG) workflows.

Extensive experience delivering enterprise applications using **Agile methodologies** (Scrum/Kanban), participating in sprint planning, daily stand-ups, backlog refinement, reviews, and retrospectives.

Proven technical leadership with **excellent communication**, team mentoring and cross-functional stakeholder collaboration

Education

- Bachelor of Technology, Information Technology, College of Technology, G.B. Pant University of Agriculture and Technology, Pant Nagar, Uttarakhand, India

Training and Certifications

- Reimagine Software Development Life Cycle (SDLC) with AI. Udemy Certification
- Generative AI for Beginners: Fundamentals, Tools & Prompts. Udemy Certification

Skill Set

- Expertise in designing, developing, testing, deploying, and maintaining large-scale enterprise applications with high availability and scalability.
- Strong proficiency in software architecture patterns including Microservices, Event-Driven Architecture, MVC, and Domain-Driven Design (DDD).
- Proficient in programming languages such as C#, TypeScript, JavaScript, Python, and SQL; experienced in API design and development, including SOAP and RESTful APIs.
- Extensive experience in .NET Core, .NET Framework, Angular, Node.js, Vue.js, and tools like Visual Studio and NPM; strong background in databases including Oracle, SQL Server, Sybase, and MongoDB.
- Hands-on experience with messaging and event-driven systems such as RabbitMQ and Azure Queue for building scalable, decoupled architectures.
- Well-versed in cloud technologies including Microsoft Azure and Red Hat OpenShift, with expertise in CI/CD pipelines, CloudBees, Docker, and Kubernetes, along with version control tools such as Git, GitHub, GitLab, and Bitbucket.
- Strong experience in full-stack development, delivering responsive UI and high-performance backend systems.
- Experience integrating AI-powered features such as chatbots, recommendation systems, and intelligent automation into enterprise applications.
- Practical knowledge of Machine Learning lifecycle, including data preprocessing, feature engineering, model building, evaluation (F1 score, confusion matrix), and deployment.
- Hands-on experience in Agentic AI systems, including designing intelligent agents capable of reasoning, intent detection, tool invocation, and workflow orchestration.
- Familiar with LLM integrations, prompt engineering, and Retrieval-Augmented Generation (RAG) using vector databases and contextual search systems.
- Proven technical leadership with excellent communication, team mentoring and cross-functional stakeholder collaboration

Programming Languages and Frameworks	• C#, .NET framework, .NET Core, ASP.NET Core, JavaScript, TypeScript, Angular/React/Vue, Python (for AI/ML, data processing, automation), SQL, Node JS
UI Technologies	• CSS, jQuery, HTML5, AJAX, XML, Bootstrap, Angular
APIs and middleware	• ASP.Net Core API, Entity framework, ADO.NET, WCF, REST, JSON, SOAP, Web Services, RabbitMQ, Graph QL Service
Database	• SQL Server, Oracle, Sybase, MongoDB, Basic exposure to Vector Databases (for AI/RAG use cases)
Tools and platforms	• Jenkins, Cloud bees, JIRA, Confluence, TFS, SharePoint, GitHub, Bitbucket, SVN
Cloud Platforms	• Azure, AWS, Red Hat OpenShift, Docker & Kubernetes
AI / Machine Learning	• Machine Learning (classification models, Decision Trees, model evaluation), Data preprocessing, feature engineering, EDA (Exploratory Data Analysis), LLM Integration & Prompt Engineering, Agentic AI (workflow-based intelligent agents, tool orchestration), Retrieval-Augmented Generation (RAG), LangChain, Vector Search, Chatbots & AI-driven automation systems

Honors and Awards

- Two times Bravo Awards
- Pat on the Back award
- Certificates of Appreciation
- Service Commitment award
- The A Team Award

Recent Projects

Project name

Donor Engagement & Experience Platform (DEEP)

Client

A U.S.-based, fast-growing retail organization specializing in large-format thrift stores offering a wide range of affordable second-hand products, focused on sustainability, recycling, and community impact through job creation and reuse initiatives.

Duration

July 2024-till date

Description

Project involved a scalable, cloud-based donation management platform enabling end-to-end lifecycle handling of donor pickups, logistics, and thrift store operations. The system supports multi-tenant architecture with organizations, outlets, and ZIP code-based segmentation, ensuring efficient workload distribution. Integrated multiple third-party services for routing, communication, analytics, and pricing optimization, while leveraging asynchronous processing and cloud-native services to ensure high availability, performance, and scalability.

Technology Stack

Angular, .NET Web API, C#, Microsoft Azure, Azure Queue Storage, Azure SQL Database, Big Query, GitHub Actions, SonarQube, Docker, Kubernetes

Responsibilities

- Owned end-to-end system architecture on Microsoft Azure, driving the development and rollout of new features, while ensuring scalability, maintainability, and high availability.
- Led full-stack development using Angular (frontend) and .NET Web API (backend), ensuring seamless integration and performance.
- Architected asynchronous, event-driven workflows using Azure Queue Storage to handle high-volume background processing and task orchestration.
- Integrated third-party platforms including Dispatch Track for route optimization and driver tracking to streamline logistics and routing.
- Designed and implemented communication architecture leveraging Maropost, SendGrid, and Twilio for automated multi-channel notifications.
- Built and maintained end-to-end CI/CD pipelines using GitHub Actions, automating application build, testing, code quality validation, containerization, and deployment processes.
- Integrated SonarQube into GitHub Actions workflows to enforce code quality standards, monitor technical debt, track code coverage, and implement quality gates for release readiness.
- Containerized frontend and backend applications using Docker, ensuring consistent and repeatable deployments across development, staging, and production environments.
- Managed container orchestration using Kubernetes, configuring deployments, services, ingress, config maps, and autoscaling policies to support scalable and highly available workloads.
- Collaborated with business stakeholders to translate requirements into scalable technical solutions and architecture decisions.
- Mentored team members, reviewed code, and enforced best practices in design patterns, API standards, and cloud architecture.

Project name**Conversational AI****Client**

A multinational independent wealth management firm that offers customized portfolio solutions in diversified alternatives such as private equity, private debt, real estate and more.

Duration

Jan 2024-June 2024

Description

Project involved automating onboarding regional managers and learning management system process. It included three major systems one is Admin Portal web application which admin will use to create and send nudges to new hires for courses and other details via teams' channel, second is AI based chatbot application which will interact with users for their queries and other details and third one is LMS system where new courses and users creation and management is done.

Technology Stack

React, .NET Core Web API, C#, Typescript, JavaScript, SQL, Microservices, Bot Framework, Azure, SQL server

Responsibilities

- Expanded systems by developing new features and structural components, improving system functionality and user experience.
- Collaborating with clients to identify needs and providing effective solutions, resulting in increased client satisfaction & repeat business; determining technical requirements for projects and set work deadlines.
- Contributing to system architecture and design decisions, ensuring that the technical solutions align with the project's goals.
- Collaborated with business stakeholders to ensure successful project delivery.
- Guiding staff members through technical challenges and identifying areas for improvement, resulting in enhanced team performance and skill development
- Addressing issues related to software development, coding and engineering tasks

Project name**Surgical Product****Client**

A multinational health insurance corporation with more than 50 million members within its affiliated companies' health plans.

Duration

Jan 2022-Jan 2024

Description

Project involved automating health insurance claim process. It included processing insurance claims for expenses for different surgical operations or procedures as asked by physician or provider for member who holds insurance policy. This is done either by TPA by creating cases in window application called as Imasis or by physician by creating cases in web portal called as Provider Portal

Technology Stack

Angular, ASP.NET Core Web API, C#, Typescript, JavaScript, SQL, Microservices, Cloud bees, AWS, Confluence, Jira, Sybase, MongoDB, RabbitMQ, Redis

Responsibilities

- Expanded systems by developing new features and structural components, improving system functionality and user experience.
- Collaborating with clients to identify needs and providing effective solutions, resulting in increased client satisfaction & repeat business; determining technical requirements for projects and set work deadlines.
- Contributing to system architecture and design decisions, ensuring that the technical solutions align with the project's goals.
- Collaborated with business stakeholders to ensure successful project delivery.

- Leading a team of developers, assigning tasks, setting priorities, and ensuring that the team meets project deadlines.
- Guiding staff members through technical challenges and identifying areas for improvement, resulting in enhanced team performance and skill development
- Addressing issues related to software development, coding and engineering tasks

Project name

Fuel Ecommerce

Client

An Indian multinational conglomerate which does businesses in energy, petrochemicals, natural gas, retail, telecommunications, mass media and textiles.

Duration

Nov 2018-Jan 2022

Description

Project involved building a new ecommerce platform for ordering and delivering fuel. This includes creation of four modules i.e. Customer Module, Vehicle/Driver Module, Order Module and Admin/Operations Module for managing delivery operations.

Technology Stack

Angular, ASP.NET Core Web API, C#, Typescript, JavaScript, SQL, Microservices, Azure, Confluence, Jira, Oracle

Responsibilities

- Led the development of a fuel e-commerce project, enabling convenient fuel delivery to customers' doorsteps and increasing customer satisfaction.
- Worked closely with clients to analyse requirements and document use cases.
- Contributing to system architecture and design decisions, ensuring that the technical solutions align with the project's goals.
- Developed and implemented new modules to facilitate business growth.
- Provided technical solutions to resolve issues related to software development and coding.
- Collaborated with business stakeholders to ensure successful project delivery

Project name

Online Questionnaire

Client

A British-American multinational company which provides Insurance services.

Duration

Aug 2015-Nov 2018

Description

The online questionnaire is part of operational improvement program (known as Skyline). The purpose of the project is to convert the excel/word based manual client questionnaire into a digital process and move questionnaire system to online. This will streamline the process, reduce the effort involved and improve the quality of information collected.

Technology Stack

ASP.NET MVC, C#, JavaScript, SQL, Microservices, TFS, Confluence, Jira, SQL Server.

Responsibilities

- Worked closely with clients to analyse requirements and document use cases.
- Worked as senior developer, developing major components of an application.
- Worked closely with business analysts for testing and resolving queries occurred during the QA and UAT process.

Project name**Forms Processing System****Client**

An Indian banking and financial services company which is India's largest private sector bank by assets.

Duration

Jan 2011- July 2015

Description

This project is part of the account opening system developed for the client. It provides the fast and accurate data capture from the scanned images. Data captured by the application is then sent to core banking system. Application also generates daily EOD reports to be used by the branches.

Technology Stack

ASP.Net MVC, WCF, SQL Server

Responsibilities

- Worked as developer for enhancements done for moving system to new core banking system.
- Follow up with testing and performance team for defect fixing
